Professional
VTOL UAS**

RELIABILITY BASED ON EXPERIENCE

HighEye helicopters are designed for aerial work and produced using aviation grade materials. Equipped with an advanced pan & tilt unit, this is the ideal platform to deliver high quality aerial imagery with HD, DV Cam, video, 16mm or 35mm film cameras.

The ability to fly programmed routes over long distances, their endurance, the capability to accommodate a wide range of professional cameras, the stability of the tilt & pan units, and the aircraft's stable & reliable flight properties, make these UAS the ideal tool to capture aerial imagery that would otherwise be impossible.
